

# Linh Huynh

Bay Area, CA | vanlinhtpnt@gmail.com | (408) 690-5492 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## EDUCATION

---

**B.S. in Computer Science** — University of California, Davis

Graduated June 2026

Relevant Courseworks: Data Structures & Algorithms, Operating Systems, Computer Architecture, Software Engineering, Machine Learning, Artificial Intelligence Fundamentals, Computer Vision

## EXPERIENCE

---

**AI Engineering Intern** — [Helix International](#) (acquired by IBM)

Jun 2025 - Sep 2025

- Worked directly with founding engineers to report model benchmarking results weekly
- Contributed to an internal **Gen AI** tool using **RAG** so customers can query company data in plain English
- Set up **vLLM** on a GPU desktop for local offline inference and ran **Qwen, Llama, and Gemma** models on-device
- Developed a 70+ case YAML benchmark suite with hand-curated SQL ground truths to validate model accuracy
- Tuned weak models with prompt engineering and context adjustment, improving accuracy from *roughly 60–70% to about 90%*

## ADDITIONAL EXPERIENCE

---

**Lab Researching Assistant** — UC Davis

Jun 2026

- Assisted PhD students find and collect datasets for their **LLMs** research
- Read and summarized research papers to support literature reviews
- Prepared notes and documentation to organize research results for PhD students

**CS Tutor** — UC Davis

Jan 2025 - Jun 2025

- Explained Data Structures & Algorithms concepts to undergraduate CS students one-on-one
- Helped students debug Python code by walking them through logic and syntax errors step by step

## TECHNICAL SKILLS

---

Programming Languages: Python, Java, C++, JavaScript, TypeScript, SQL

Backend Development: FastAPI, Node.js, REST APIs, Express

Web Development: React, HTML/CSS, Tailwind CSS, D3.js, Recharts

LLMs Technique: RAG, Prompt Engineering, LangGraph, Open Source LLMs (e.g., Llama, Phi, Qwen)

Databases: PostgreSQL, Supabase

Deployment & DevOps: Vercel, Render, Docker

Version Control: Git, GitHub

## PROJECTS

---

[Job Search Automation Agent](#) | Python, Anthropic Claude API, Pydantic

Aug 2026

- Built an **AI agent** that finds job listings, matches them to my resume, and drafts tailored bullets with a human review step
- Added a **Pydantic** check that requires every tailored bullet to match a real quote from my resume, or it gets flagged as a gap
- Found and fixed a caching bug where the fetch tool returned a months-old page as current; fixed it by validating the response metadata before the agent used it
- **Cut API cost 85%** by isolating fetches into separate calls and routing simpler tasks to smaller, cheaper models

[JourZy — AI Travel Planner](#) | React, Gemini API, Ollama, Google Maps API

Feb 2026 - Present

- Built and shipped a chat-based travel planner that turns a conversation into a full day-by-day itinerary on **Vercel**
- Designed a relational schema in **Supabase (PostgreSQL)** to store user preferences, chat history, and saved trips
- Implemented a local model fallback (**Ollama gemma3**) for offline inference when the cloud API is unavailable
- Integrated Google Maps, Google Places, and OpenWeather APIs for real-time routing, locations, and live weather data
